

Free KidCare Vitamin Program at Red Cross Pharmacy!

As a parent, your child's health is a top priority. Here at Red Cross Pharmacy we're also committed to ensuring every child in our community gets the nutrients they need to grow and thrive. That's why we're introducing KidCare, a free program that gives children from K-5th grades a free monthly supply of children's multivitamins for one year.

How your child benefits

While a well-balanced diet should provide most of the vitamins and minerals your child needs, they still might not be getting their recommended daily requirements. Multivitamins can fill that gap. Taken on a daily basis, multivitamins can:

- Promote stronger immune systems
- Aid in brain and nervous system development
- Build healthy bones and muscles
- Contribute to dental and eye health
- Provide protection from certain diseases
- Ensure proper metabolism

And since healthy children are better prepared to battle common illnesses and miss fewer days of school, enrolling your child in the KidCare program can even help reduce doctor's visits and time off work.

How the program works

To sign up for KidCare, just fill out the registration form that was sent home from school with your child. Bring your completed form to your local Red Cross Pharmacy and present it to receive your punch card and first free month's supply of Red Cross Pharmacy Brand Children's Multivitamins.

Once you're registered, simply present your punch card to a Red Cross Pharmacy staff member each month. He or she will punch your card and give you your free monthly supply of vitamins.

Red Cross Pharmacy looks forward to helping you raise a healthier child. Take the first step and sign up for KidCare today!

This KidCare Free Vitamin Program card may be redeemed once per month and is only valid during the current month. KidCare Vitamins do not contribute points toward your Red Cross Pharmacy CareCard. Red Cross Pharmacy may discontinue the KidCare Free Vitamin Program at any time.

Did you know?

Vitamin D deficiency, which can cause skeletal deformities and Rickets, is common in children and adults.

Water soluble vitamins—B, C, and folic acid—are not stored in the body and must be taken every day.

The best time to take a vitamin supplement is with a meal—preferably lunch or dinner.
